Concise patio decking grey,  
brown cladding and black wall laths

Concise patio decking grey

Concise patio decking and grey wall laths

Concise patio decking grey

The decking for an outdoor space is more than simply functional – it provides a design opportunity for your home or cabin in the mountains. MøreRoyal is a range of pre-treated materials designed to cover any application in the outdoor space – and all the materials are easy to combine. Classic style with or without grooves – or a more contemporary look with straight edges and a surface with a smooth finish.

*The choice is yours!*

© Ljardard Foto

# This is MøreRoyal®

MøreRoyal is a range of premium, double-treated materials, pre-painted and ready for use.

The double treatment of the materials means that they offer unique properties that are perfect for the Nordic climate.

**In short: materials with added superpowers!**

With a range covering patio decking, laths, cladding and timber roofing, MøreRoyal products are just as popular among private customers as they are with professionals.

The materials are made of PEFC-certified raw materials, are certified ECOproducts and frequently used in BREEAM-certified buildings. This makes MøreRoyal a safe and green choice – now and in the future.

**Practical side table**  
Leftover wood can easily be turned into a great little item of furniture. This side table is just the right height for a good book or a refreshing drink.

**TIPS:** if you want the base in a different colour than the top, choose laths in black, for example.

Tips for this table and many more items of furniture can be found at **talgo.no** – or by scanning the QR code.

*Double-treated  
- Twice as good!*

Concise lath decking grey

## How MøreRoyal is made®

During the manufacturing process, the materials undergo two different treatments. The timber is first pressure-impregnated, before being vacuum-dried in hot royal oil.

This can be compared to giving pressure-impregnated materials an additional 'raincoat' which protects against harsh weather conditions. We like to call this 'the royal treatment'... This is something that produces premium materials.

### PRESSURE IMPREGNATION

First, the materials are pressure impregnated with an impregnating agent, which ensures effective protection against rot.

### DRYING IN LINSEED OIL

The materials are then vacuum-dried for 6–8 hours in a linseed oil mix. This process forces moisture out of the wood, while hot oil penetrates 1–2 mm into the surface from all sides. The result is timber that is saturated and sealed on all surfaces. This form of oil sealing reduces moisture uptake, shrinkage and swelling, resulting in highly stable wood. Colour pigments can also be added to the oil under the same process. Once the materials have received their Royal treatment, they are ready for use.

**PROVIDES UNIQUE PROPERTIES**

- 1 Less splintering
- 2 Less cracking
- 3 Minimal shrinking/minimal swelling = dimensionally stable timber
- 4 Longer service intervals and simpler maintenance

# Why MøreRoyal®?

## COMPLETE AND READY FOR USE

MøreRoyal is a range of pre-painted materials, ready for installation without additional topcoats. It doesn't get any easier than that! Our materials can be installed at any time of year in any weather or season so you don't have to wait for perfect weather conditions.

## PRODUCT BENEFITS

### First-grade lumber

MøreRoyal is produced from first-grade lumber. To become a MøreRoyal product, the material has to go through strict grading – only the best is good enough.

### Dimensionally stable materials

The MøreRoyal treatment ensures that the materials have a minimum of warping, shrinking, swelling and cracking.

### Less splintering

Materials that are MøreRoyal-treated are protected against changes caused by fluctuations in temperature and humidity. This means materials that splinter less.

### Treated on all sides

The MøreRoyal process treats the materials on all sides so that the properties of the wood are retained – regardless of external exposure.

### Guarantee against rot

The MøreRoyal treatment encapsulates the impregnation in the timber to ensure extremely effective protection against rotting. MøreRoyal has the very best rot classification – Class 1 and a 50-year guarantee against rot!

*Find out more*

at **talgo.no**

Concise patio decking and cladding brown

## GREAT IN A TOUGH CLIMATE

Extreme weather and large fluctuations in both temperature and moisture are becoming more common. Building a house that is able to withstand a rougher climate requires robust materials such as MøreRoyal.

## INFREQUENT AND SIMPLE MAINTENANCE

During the MøreRoyal process, oil is pressed into the timber for extra long-term protection. When the oil needs to be topped up – either for cosmetic or quality reasons – this can easily be done by adding a little more MøreRoyal oil to the wood.

# Colours MøreRoyal®

## COLOURS PATIO DECKING

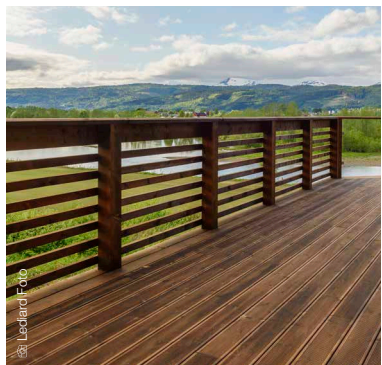

MøreRoyal patio decking comes in three colours. The colours are transparent, giving the materials a rich surface and bringing out the grain of the wood.

There may be a slight variation in the colours due to heartwood, sapwood and knots absorbing different amounts of oil and pigment. This brings out the natural properties of the timber.

**MøreRoyal grey** is a warm grey tone that is rich and natural. Materials in grey will attain an increasingly natural grey colour as they weather.

When fresh, the grey colour may appear greenish or brown as a result of the royal impregnation. This will change as the materials weather, and the grey pigments become more prominent over time.

**MøreRoyal brown** is a warm and golden colour. With warm base tones, the colour fits beautifully into most environments.

**MøreRoyal natural** contains no added colour pigments. When fresh, the colour will appear golden. The materials then become grey over time, and they gain a grey and extremely beautiful patina as they weather.

Remember that areas under an overhang or in the shade will not react in the same way as surfaces that are directly exposed to sunlight.

## COLOURS OVER TIME

The colours will fade as they are exposed to a harsh European climate. The final result is individual and there is no one-size-fits-all result, but all colours will appear more muted over time. Remember, however, that the oil is boiled into the wood and continues to protect the materials.

Find out more about how colours weather over time at **talgo.no**

## COLOUR CODES

MøreRoyal has transparent colours and no two decking surfaces will never be identical. Do you need tips on which NCS or RAL colours that are similar to MøreRoyal colours? We recommend seeking advice and guidance from your paint supplier as many factors can affect the final result.

## FRESHENING UP THE COLOUR

To freshen up the colour, simply add a layer of clear MøreRoyal EXCLUSIVE patio oil. How to bring the colour pigments to life again.

# UNO PATIO DECKING

This patio decking has a grooved and a smooth side. The grooved side is defined as the A side.

### UNO – WITH GROOVES

UNO patio decking in MøreRoyal grey is single-sided patio decking that is laid with the grooved side up. Uno is pre-painted in a beautiful, transparent grey – just as perfect for the contemporary home as for the holiday cottage. The grey colour will develop over time, becoming a lighter grey after a winter.

### Listen...

Do you prefer to lay the UNO decking with the smooth side up? This is also possible. The decking is sold as single-sided as so-called stream marks may occur during production. These marks will fade and even out over time.

So, grooved or smooth – the decision is yours.

# DUO PATIO DECKING

This patio decking has a grooved and a smooth side. The grooved side is defined as the A side, but both sides can be used. This ensures more options to cater to personal taste and design requirements.

### DUO = REVERSIBLE

DUO decking is double-sided and reversible. This means that either side can be used – with the grooved or smooth side up. For a more creative look, dimensions can be combined or individual frames can be created.

# AT HOME WITH MARIANNE STENSRUD

In the design of her home, Marianne Stensrud places great emphasis on well-being both indoors and out.

**Marianne Stensrud**  
Interior designer / set designer /  
stylist / creative director of Bohus  
  
@marianne\_\_stensrud

Building your dream home doesn't have to mean starting from scratch. Building something new is expensive, and more and more people redesign their current home and undertake a comprehensive renovation project instead. With a clear plan and a little creativity, it is entirely possible to create gold from grey stone.

## THERE IS NO PLACE LIKE HOME

"In recent years, we have completely renovated our home, including the outdoor areas. We spend a lot of time outdoors in our garden and wanted the same standard and style throughout the house," says Marianne.

This is a tip that shouldn't be ignored because a home is so much more than the sum of everything within the four walls of the house. Whereas in the past, people often built an oblong box along one of the four walls of

the house and called it a patio, they now take it a whole lot further. Outdoors is the new indoors, and time and effort is spent on taking outdoor spaces to the next level. It also means that the choice of materials is much more important than it was before.

"Choice of materials is about both design and properties," Marianne points out. "For our part, we wanted materials that matched the other choices we had made on and in the house. And although it may

be easy to forget this, patio materials also come in different designs, dimensions and colours.

Instead of picking the cheapest, it's well worth spending some time on your choices as the cheapest now may not be the cheapest in the long run, when you add up purchase price, maintenance and durability. Maintenance-friendly materials were simply a must here in the courtyard. Like so many others, we live busy lives and don't want to spend the short summer months here in Norway staining or replacing decking. We preferred to invest in quality so that we are able to enjoy ourselves with family and grandchildren around a large table overflowing with great food instead."

## A PROJECT WITHOUT A DEADLINE

At Marianne and Torgeir's house, Marianne thinks up the design ideas while Torgeir puts these ideas into practice. Together they make up a good team, and the pair usually have a project on the go.

"You know, you really never finish. Luckily. It's only natural that we're constantly inspired and take our ideas home with us and use them in our own garden. But that doesn't mean that we do a complete renovation every five years. Small steps and adjustments are all that's needed for a little renewal," explains Marianne.

**And Marianne and Torgeir have completed quite a few projects over the years, most of them using MøreRoyal, which has created a holistic and consistent outdoor space.**

"Our outdoor space has simply received some well-deserved attention in recent years. Different zones have been established using decking, stairs and windbreaks. The colours of the materials were really crucial for us, and we have chosen grey decking combined with black laths and trellises. The natural colours 'settle' after they have been left for a while, which we think is very beautiful. And we have taken inspiration from the slatted elements in the kitchen, bathroom and front door which inform the ideas outside, so that the style is consistent throughout."

## MARIANNE'S AND TORGEIR'S OUTDOOR SPACE

If you have plans to start work on your outdoor space this summer, start at one end and take it all 'one step at a time'. It often pays to view it as a marathon and not a sprint so that you are able to make adjustments along the way. But still, make an overall plan to start from so that you always keep your eye on the end goal.

Are you looking for inspiration for an outdoor space? Find out more about Marianne and view more articles at [talgo.no](https://talgo.no) – or scan the QR code.

## MARIANNE'S TIPS:

### 1. Feel free to get started yourself, but do listen to experienced professionals

"There's a lot you can build yourself, but know your limitations. It's important that everything is of a high enough standard. That's why we chose to have a carpenter build all the scaffolding, but laid all the trellises and decking ourselves," says Marianne. "We were then confident that the groundwork was 100% OK. At the same time, our own labour reduced the total costs."

### 2. It takes time, but details count

"In our case, the decking was laid at 0.5 cm intervals with concealed fastenings. A lot of work, but the result is so much better when you don't see all the screw fastenings. We were a little unsure about choosing the interval between the decking boards, but we're very happy with 0.5 cm as this makes it easier to clean, sweep and hose down the decking."

Building an outdoor space with slabs and stairs that create different levels is another good tip. Having everything on one level can quickly become monotonous. Also think about what the different levels and zones are going to be used for, and adapt the project to each individual purpose. How about a reading nook for those quiet moments or a sheltered area for sunbathing on those long-awaited, hot summer days?

"Take your surroundings as a starting point, and build the outdoor space around them," advises Marianne. "The land our house is on consists of several levels descending towards a stream at the end of the plot. This has resulted in our having to build a number of steps down to the

In the design of her home, Marianne Stensrud places great emphasis on well-being both indoors and out.

outdoor area, which breaks up the design compared to an outdoor area on a single level. We also have a roof, a small must in Nordic countries where the sun doesn't always play along, even though we would like to sit outside. By using the same type of materials in slightly different colours, the area has been given a clean look."

"We've also built a veranda of approx. 20 square metres at the end of the house," continues Marianne. This allows access from the second floor and means that we can enjoy the outdoors both upstairs and downstairs. The veranda works well as an overhang and provides shelter for the sofa set on the lower floor. We think that black laths/trellises on the roof covering provide an attractive design element, and since the railing on the patio and the windbreaks are built with black laths, the whole thing becomes consistent and recognisable."

"Windbreaks have multiple functions and are therefore a great design element in the outdoor space," says Marianne. "A windbreak obviously creates shelter, but can also break up and define zones as well as provide privacy. In our case, the retaining wall is set up with integrated benches that create an attractive environment. These can be used to sit on and are also suitable for placing plant pots and other decorative items. The benches also form part of the construction and function as reinforcement of the long wall."

"We are particularly pleased with the windbreak that is made up of trellises. It has become a visually beautiful

element against the stream and the greenery at the back, and it ensures privacy very effectively. At the same time, it's airy on a hot day. It's easy to feel closed in if a windbreak is too solid."

"Small projects are often the icing on the cake," emphasises Marianne. "They can add a lot to the overall impression of the space even if these aren't the projects that take the most time. We have several projects like that – ones that take the outdoor space to the next level. For example, up on the retaining wall we've built a gazebo-like structure that can be used for hanging plants. Gradually, the climbing plants will wind their way up along the structure to create an organic, green feature. Along the retaining wall we have also built a small outdoor kitchen with shelves for herbs etc., perfect for simple meals outdoors in the garden. We've also set up a bench on the path up to the garden. With a bed of straw, bamboo and shrubs, this acts as a finishing touch to the grassy slope."

Create exciting contrasts by combining different types of materials.

MoreRoyal® patio range

## CONCISE COLLECTION

Concise patio decking natural

The Concise Collection is a premium collection consisting of decking, laths, cladding and timber roofs – with a design adapted to contemporary architecture.

AVAILABLE IN THE FOLLOWING COLOURS:

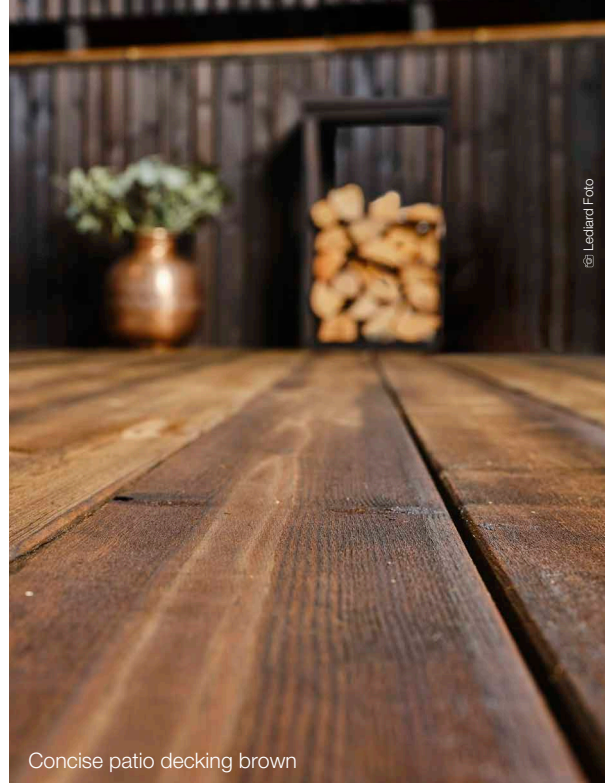

### CONCISE PATIO DECKING

<b>28x120 grey</b> NOBB 53659998 Coverage: 8.4 lm per m²	<b>28x145 grey</b> NOBB 57741486 Coverage: 6.9 lm per m²

Throughout the collection, the profiles are tightened up, with straight lines and sharper edges. This gives a holistic and clear design and a range of products that fit together well.

#### SURFACES THAT PROVIDE A 'BRUSHED' FEEL

The surface of the Concise products has a light structural planing, known as 'sawcut'. This surface provides a lovely, brushed feel. Absolutely perfect when the sun warms up enough for you to step barefoot out onto the patio for the first outdoor morning coffee of the year. Or for tiny feet that want to rush outdoors.

#### PATIO DECKING – CONCISE

Concise decking is a single-sided decking with a streamlined, stylish and contemporary design.

#### Listen...

A lath floor consists of laths used as a patio floor, alone or in a mix, which provides a new and more exciting look. Perfect for anyone wanting a simpler and more contemporary design.

#### Tips

for laying patterns can be found at

[talgo.no](https://talgo.no)

New on the patio floor front is a lath floor in the Concise Collection range from MøreRoyal.

#### LATH FLOOR – CONCISE

A lath floor consists of laths used as a patio floor, alone or in a mix, which provides a new and exciting look. Lath floors consist of laths measuring 34x45 and 34x70.

Remember that laths have several applications and can be used as a base, for railings and as a patio. Laths used on both the façade and in outdoor spaces provide a consistent and stylish overall design.

# DECKING

Concise pier decking is suitable for both larger, public projects and private jetties.

In many cities and urban areas, piers and waterfronts often play a pivotal role in urban renewal, beautification and infrastructure development. With its durability and unique properties, MøreRoyal pier decking is an excellent choice for projects like these. Like the other products in the Concise Collection, the pier decking has a brushed surface which provides an exclusive finish.

## Fastenings

In maritime environments, A4 fastenings must be used for MøreRoyal products – in stainless and acid-resistant steel.

## Did you know that...

In maritime environments, A4 fastenings must be used for MøreRoyal products – in stainless and acid-resistant steel. These wood-boring insects live in the timber and are unfortunately capable of causing wide-spread damage. To avoid this, timber should not be submerged in seawater for long periods of time. The timber should be kept well away from the tidal zone (the area covered by water at high tide) – and it will be safe.

# Tips for laying a patio

For the construction of a patio, we recommend that you draw up a comprehensive plan. Think carefully about how you want your outdoor space to look and feel free to use some of the tips available on talgo.no. This will ensure that you are happy with the end result and that the construction process is easier. The finish and details are often what determine how satisfied you will be with the end result. That is why these details are worth spending some time on.

© Ledard Foto

## Top tips!

If you choose concealed fastenings, a spacer/block must be placed on the beam at all decking joints and ends, so that the screws can attach sufficiently to the edge of the decking. Ensure that you read the installation instructions from the supplier of the concealed system – and ask your hardware store for advice before you start.

## Did you know that...

The decking boards are dried during production, and a gap of minimum 2 millimetres is recommended between the boards.

## HOW TO DO IT

### How to lay a patio

#### 1. Treat all cut surfaces

Remember to oil all cut surfaces with MøreRoyal Wood Oil to prevent moisture from penetrating the wood. The cut surfaces can be oiled quickly and easily with a brush or sponge.

#### 2. Use the correct fastenings

Stainless steel A2 fastenings or acid-resistant A4 fastenings should be used on all MøreRoyal products. Always use A4 acid-resistant fastenings in maritime or salty coastal environments.

#### 3. Use fastenings that are long enough

Check that the screws are the correct length before you start. As a rule, the screws should be about twice as long as the thickness of the materials.

#### 4. Use fastenings with the correct spacing

Screw in 1.5-2 cm from the edge and 2.5 cm from the end/joint. If you screw in fastenings too close to the ends, the board may crack, and if you screw in fastenings too far towards the middle of the boards, the wood may warp.

#### 5. Ensure the correct laying distance

Wooden materials will expand and shrink depending on the weather conditions. Follow the requirements for minimum distance between boards, joints and walls. Decking boards should be laid with gaps of 2-3 millimetres – use a carpenter's ruler, if possible.

#### 6. Ensure effective air circulation

To avoid moisture, it is important to ensure good air circulation within the structure. Remember that decking boards should not be laid right up against a wall. A gap between the decking boards and the wall is required in order to allow water to drain away.

#### 7. Ensure the correct joist spacing

The correct joist spacing in the substructure provides a stable and safe patio. Decking boards are laid on joists with a spacing of 600 millimetres. Make sure that you use joists that are dimensioned for the purpose and capable of withstanding the calculated load from snow, roof avalanches etc.

#### 8. Joining

When joining decking boards, make sure that the boards curve in the same direction to ensure a good joint.

## Did you know that...

A MøreRoyal decking board is specially treated with oil and dried down to the ideal humidity level. It will therefore not split as easily as normal decking board when screwed at edges and corners.

Concise patio decking grey

# Planning your patio

We recommend that you make a simple diagram before you start your patio project. Think about where the best place will be to eat, where the barbecue will go, where you require privacy and where you need an overhang.

Take a look at our diagram and consider whether any of the following tips might be useful to you. Once your diagram is in place, you are already well on your way – and the job will be more fun and the end result will definitely be better. Good luck!

## 1. Storage

Think of places to use for storage while you are building:

- a floor hatch
- drawers in steps
- benches/boxes in ledges
- separate storage shed

With smart solutions built into the outdoor space, cleaning is a breeze and you still have everything you need within easy reach.

## 2. Screening

Do you need screens against wind, sunlight and rain?

- MøreRoyal windbreaks – with or without glass
- windbreaks in other materials
- awnings

## 3. Visual effects/framing

Do you want to have different patio zones? One option is to mark these out with frames and patterns in the patio floor. Combinations of smooth/grooved sides and different board dimensions are great for framing and marking out zones, entrances, posts, steps, ledges in an attractive way. Unleash your imagination!

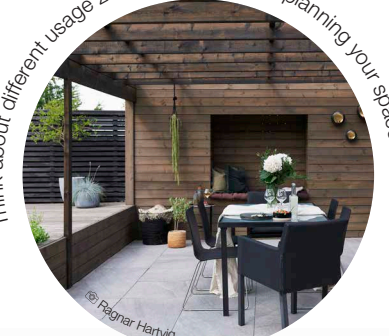

Check out our MøreRoyal sheds

Create your own comfortable outdoor space with a gazebo and plexiglass roof

Think about different usage zones when you are planning your space

Light creates a warm atmosphere for late summer evenings

#### 4. Zones

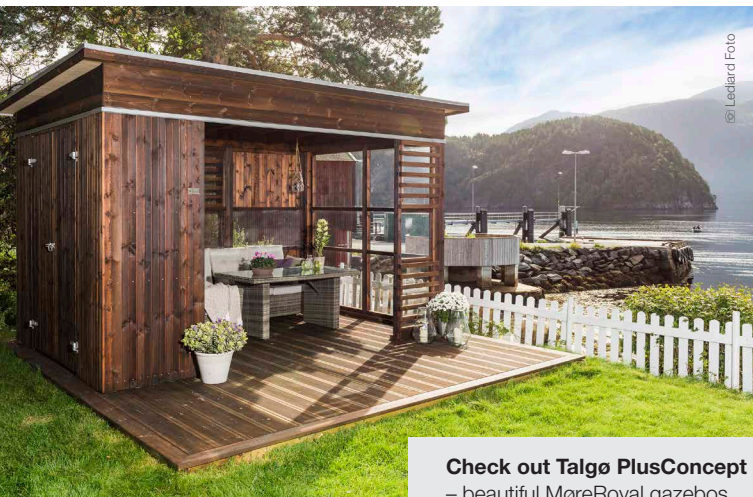

Think about different zones on your patio and how they may be suitable for different purposes according to light/shade conditions. These zones also have different requirements when it comes to privacy, views, overhangs, light and so on.

#### Examples of zones:

- dining area
- barbecue area
- relaxation area
- sunbathing area

#### 5. Platforms/levels/steps

Should your patio be built on different levels? This is a great way of breaking up large areas and making the patio more inviting and exciting. Perhaps steps/level dividers could be built in as benches or storage boxes? The bigger the patio, the more advisable it is to break up any large areas.

**Check out Talgø PlusConcept**  
– beautiful MøreRoyal gazebos

#### 6. Under cover

Maybe you should think about a separate gazebo which will be shelter you from the weather, ensure that you are able to sit comfortably and extend the summer season as well as allow you to have somewhere to store your garden furniture in the winter?

#### 7. Lighting

Where is the best place to install lighting?

- on walls
- recessed in the patio
- along pathways
- on railings/windbreaks
- in plant boxes

#### 8. Pathways

Where will paths across the patio naturally run? This is where you will see the most wear and tear so you should perhaps look at:

- reinforcement with gravel/outdoor tiles
- reinforcement with railway sleepers
- gravel as underlay for barbecue/fireplace

#### 9. Looking in/out

When choosing screening, think about where you want to prevent anyone looking in or where you want to be able to look out.

- MøreRoyal windbreaks – with or without glass
- MøreRoyal windbreaks with trellises/laths
- MøreRoyal railings or glass

#### 10. That little bit extra

If you have a large patio, you may want to go that little bit further? How about a jacuzzi or a patio plant box built into the patio floor? This can be done in several different ways e.g. using:

- patio decking
- railways sleepers
- stones

The sky is the limit – and many more ideas can be found at **[talgo.no](http://talgo.no)**

Concise patio decking grey

We deliver in various lengths as standard, but offer fixed lengths/precuts for any project.

## Projects

MøreRoyal products are widely used on projects with stringent requirements for quality, long life, low maintenance and the environment.

Contact our professional advisors for advice and quotes.

#### WHY USE MØREROYAL FOR YOUR PROJECT?

- Premium quality
- Pre-treated
- Ready for use without the need for additional topcoats
- Can be installed in all seasons
- Dimensionally stable materials
- Long durability
- Extremely rot-resistant
- Infrequent and simple maintenance
- Environmentally friendly from start to finish
- Available in several natural colours

# THIS IS HOW HALVOR BAKKE USED MøreRoyal® AT HOME IN TRAE

© Lendard Foto

Not far from his childhood home, Halvor Bakke has found his oasis – on a small farm in Trae near Stavern. The small farm itself originally dates back to the 1840s and was extended in 1920. Out here, Halvor has given his passion for design and interiors free rein, and the results speak for themselves. Let's take a closer look at Halvor's exciting outdoor space.

## A PLACE FOR CREATIVITY TO UNFOLD

When you are a television host, a designer, an author and an ambassador for multiple brands, it is inevitable that your schedule quickly becomes packed. But Halvor Bakke has learned to give himself a breathing space for a better work-life balance, and at his home in Trae his creativity comes into its own.

"When I'm designing a new collection, there's a lot that inspires me, especially when I'm travelling. But my own creativity is best expressed when I'm wandering around here at home on the small farm in Trae," explains Halvor. "Maybe it's because this is the place where I find the most peace, where I'm able to wander around on the patio and have a coffee while listening to the birds chirping early in the morning.

## HALVOR'S OUTDOOR SPACE

No one can doubt that Halvor's creativity has found a real outlet out here in the countryside. This is clear to anyone who is lucky enough to be invited inside. The garden is largely located at the back of the main building, shielded from the road that winds past on the opposite side. This means that Halvor is protected from curious passers-by who might like to get a glimpse of life inside.

"It's important to me that I can be myself out here, and fortunately most people respect that. After all, this is my home and a place that's reserved for me and my family. I've spent a lot of time both indoors and outdoors to make it just the way I dreamed of, and now I'm getting there very fast," laughs Halvor.

The surroundings testify to the fact that Halvor has created an appealing oasis for himself. The area includes a greenhouse, a spacious patio with Halvor's own outdoor furniture collection, a small pier into a carp pond, an abundant kitchen garden, a sun deck for sun-worshippers, an awning for grey days and an outdoor shower that is used as soon as spring arrives.

## A PIER IN THE COUNTRYSIDE

Halvor Bakke's patio has undergone an extreme transformation. Last year, the old patio was replaced with Concise patio decking in grey. Halvor has furnished a generous seating area with space for many guests, and the patio has become an ideal place for socialising. The patio ends in a small pier into the carp pond, decorated with lanterns that create a warm atmosphere when darkness descends.

"There's something about sitting down on that pier, whether I'm alone on a summer morning or with good friends late in the evening. Concise has a lovely, brushed surface so we like to wander around barefoot here and just enjoy the sight of the fish playing in the pond. It brings you absolute peace," says Halvor.

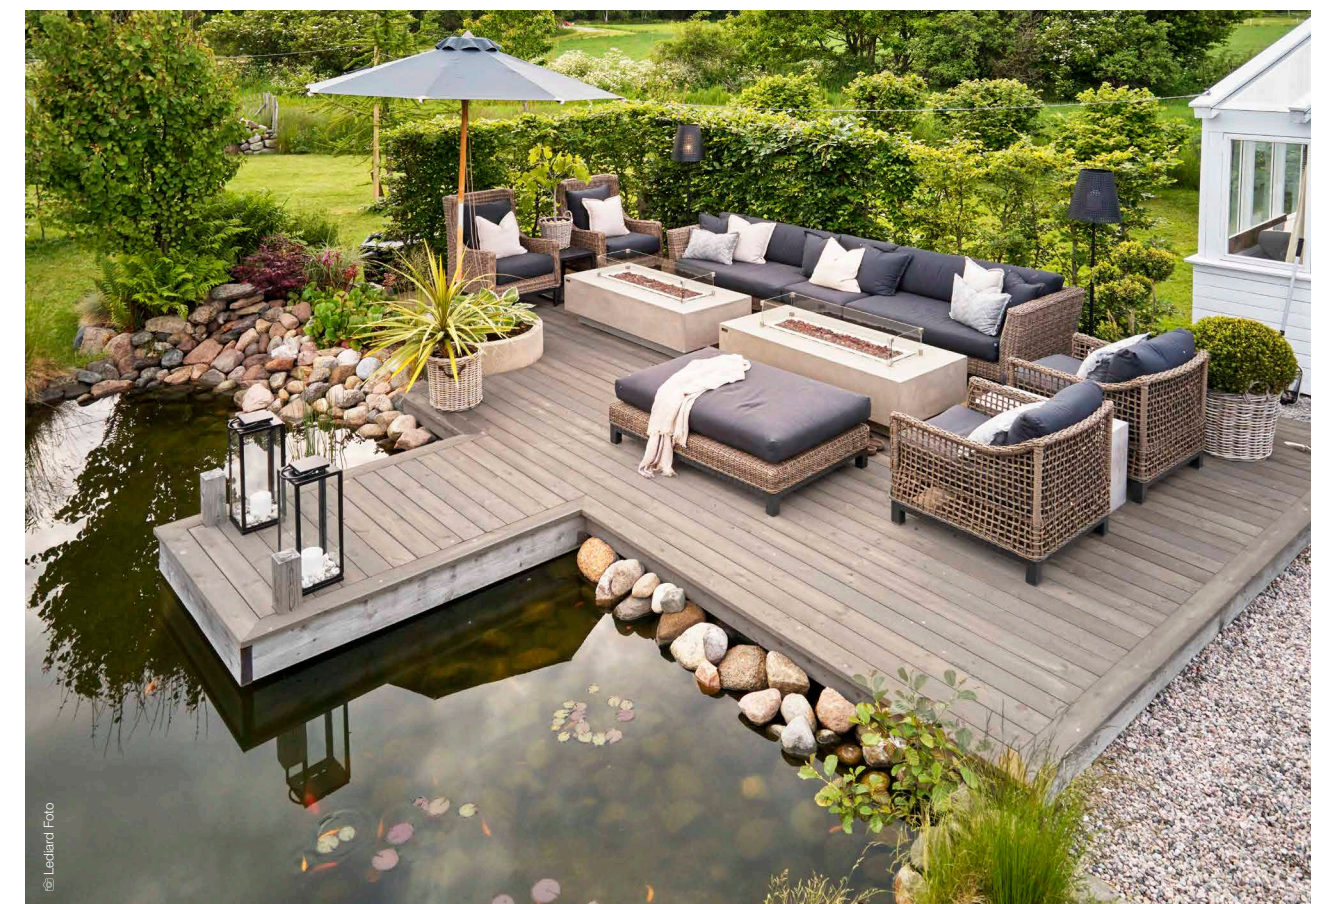

© Lendard Foto

**The choice of a MøreRoyal patio in grey was no coincidence either.**

"I'm a big fan of MøreRoyal products. There's something about wood. It's so real, honest and natural." And since MøreRoyal's decking boards come pre-treated in several colours, the job is done when the decking is installed. No additional painting required!

"I fell for the grey decking this time because it fits in especially well here at Trae. The boards have a lovely, warm grey hue, but will eventually be affected by the weather and the ravages of time. The decking boards will grey even more over time and acquire a lovely weathered patina, and that's what I like about it the most."

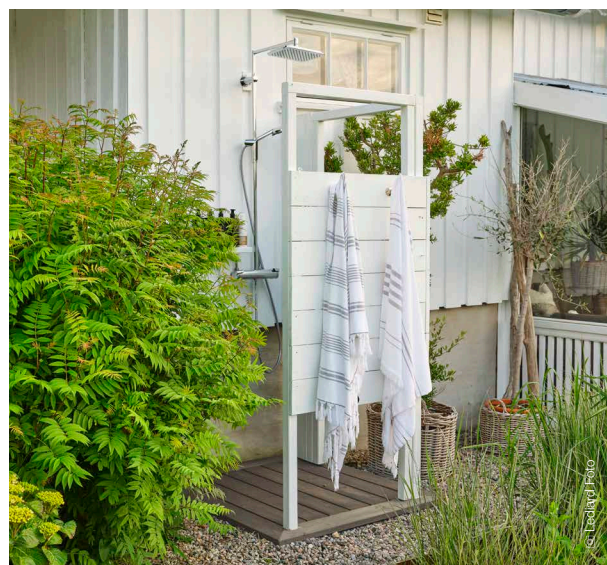

© Lendard Foto

## A SUN DECK IN THE GARDEN EVERYONE SHOULD HAVE

In the garden, Halvor has also built a small sun deck for when temperatures start to rise. A small windbreak has also been built here. This screens off the view, but also provides a cosy nook where life can be enjoyed under the parasol.

“This is actually my favourite place, if I say so myself,” admits Halvor. “I love it! Flat out on the sunbed, relaxing and being extremely happy finally to have reached the end of an all-consuming outdoor project.”

## A SHOWER WITH PUNCH

However, not all outdoor projects need to be that extensive. Even small projects have come into their own in Halvor's garden. Taking a shower outdoors and ensuring a refreshing start to the day is something Halvor enjoys.

“I absolutely love starting the day with an outdoor shower,” says Halvor. “It's just fantastic! The wooden frame of the outdoor shower at Trae has been painted to match the house. I've also built a small area of MøreRoyal decking as these are materials that can take that little bit extra. I recommend that everyone should hone their skills on some simpler do-it-yourself projects, whether it's an outdoor shower or other projects for the garden. It gives you a feeling of accomplishment, and soon you'll be ready to tackle larger outdoor projects,” he concludes confidently with a twinkle in his eye.

## The favourite spot

Halvor Bakke's favourite spot is the beautiful sun deck. He loves stretching out on the sunbed, relaxing and being happy finally to have reached the end of an all-consuming outdoor project.

## Environment

Over the years, MøreRoyal has been certified, classified and assessed from raw material to finished building with excellent scores at all stages.

The range is produced from sustainable Nordic forests, undergoes an environmentally friendly production process and has properties that ensure a long life. This makes MøreRoyal an environmentally friendly and safe choice – both today and in the future.

## Other products

### BOARDS

MøreRoyal boards can be used as façade material, decorative elements in a building or as construction timber/fastening material. With laths on highly visible parts of a building, stringent requirements are placed on the quality of the materials. That is why we have developed the Concise Collection, especially designed for modern architecture, with its straight lines and sharp edges, and a smooth finish.

### CLADDING

MøreRoyal cladding comes in a wide spectrum of classic and contemporary profiles and dimensions for different architectural styles. It will be a matter of taste and practical consideration whether your house needs vertical or horizontal, narrow or wide, plain or profiled cladding. Perhaps you prefer to combine several types or dimensions?

### TIMBER ROOFS

MøreRoyal timber roofs are beautiful, durable and environmentally friendly. We offer an excellent range encompassing many variants, including roof boards with tighter lines and a more contemporary look. The special MøreRoyal impregnation means that the wood does not absorb water, and the roof boards are lightweight and quick to install.

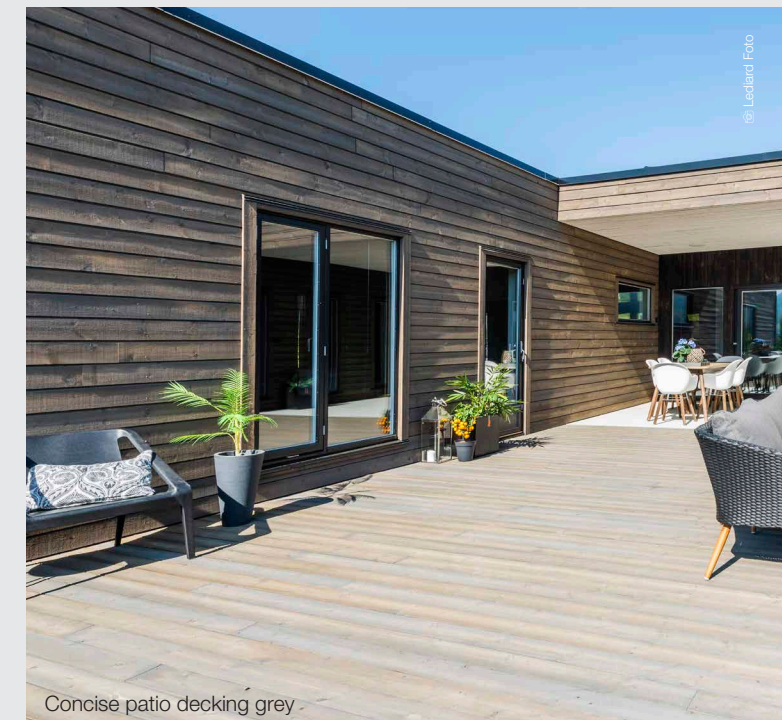

All building kits are part of our Talgø PlusConcept collection by BLOM ByggDesign.

### GAZEBOS AND SHEDS

Talgø PlusConcept is a range of architect-designed MøreRoyal building kits. Both the gazebos and sheds are available in different sizes and designs to enable you to find the one that best suits your requirements. Or design your own model using our simple design application: **byggmodul.talgo.no**

### THINK HOLISTICALLY AND CREATE HARMONY IN OUTDOOR SPACES

Outdoors has become the new indoors, and as soon as the spring sun begins to warm us, we Scandinavians move out into the garden. This means that far more is now being invested in outdoor spaces than before, with the goal of creating a holistic and harmonious outdoor space – often divided into zones and levels. MøreRoyal's collections make this easy to achieve and reduce the need for maintenance. This gives you more time to enjoy the good life – including in the garden.

Concise patio decking grey

## Railways sleepers

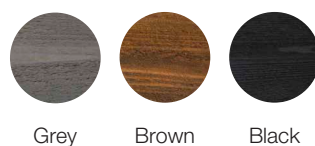

In recent years, solid railway sleepers with a rustic surface have become popular in outdoor spaces.

Railway sleepers are used as stairs, ledges, walkways, retaining walls and to frame beds and patios. The sleepers are available in black, brown and grey and are supplied in fixed lengths of 1.75 m.

### RAILWAY SLEEPER COLOURS

## Garden sleepers

Robust garden sleepers are a useful product for the outdoor space and are used for retaining walls, flower beds or to frame the garden.

The garden sleepers have two flat and two curved sides. The sleepers are available in grey, brown and CU-impregnated and are supplied in fixed lengths of 2.50 m.

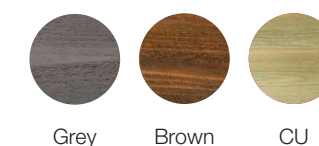

The garden sleepers are impregnated Class A  
– certified for soil contact

# MøreRoyal® windbreaks

MøreRoyal windbreaks are perfect for creating shelter on the patio.

This collection consists of several different models that go well together – and are available both with and without glass. This means that it is easy to adjust how much privacy and how much of a view and you want in different parts of your outdoor space.

The windbreaks have a simple, stylish and modern design, similar to the gazebos and sheds in the Talgø PlusConcept collection. Available in MøreRoyal grey and brown.

## FACTS ABOUT MØREROYAL WINDBREAKS

- Several types of wall elements available – in the same contemporary design
- Solid walls protect against wind and provide privacy
- Glass walls ensure a view
- Similar design inside and out
- No visible screws on the wall surfaces
- All glass is 4-millimetre-thick tempered glass
- Solid frame measuring 36x73 millimetres

*Modern  
and solid*

## NO NEED FOR EXTRA POSTS AND FITTINGS

Our windbreaks do not require extra posts and fittings as they are easily assembled into each other. However, take into account local wind conditions and ensure extra support if required. If you are going to assemble multiple windbreaks in a row and need reinforcement, you will be able to add extra posts.

# Talgø PlusConcept

The Talgø PlusConcept is a range of MøreRoyal architect-designed gazebos and sheds. They can be built up using elements that are easy for anyone to install – regardless of how good they are at DIY.

Our varied selection offers something for everyone. Visit [talgo.no](https://talgo.no) to find your favourite!

## MODULE-BASED MØREROYAL GAZEBOS AND SHEDS

All Talgø PlusConcept models are constructed in elements that are 60 cm/120 wide and 220 cm high, and all elements have a depth of 266 cm (external dimension). The elements have different designs: solid, with different glass sections, as well as with and without bars. These elements can be combined in different ways to provide a perfectly tailored solution.

## COLOURS

All gazebos and sheds are available in two colours: MøreRoyal brown and MøreRoyal grey.

### PLUSCONCEPT COLOURS

Grey

Brown

Remember that you can also design your very own model using our simple design application.

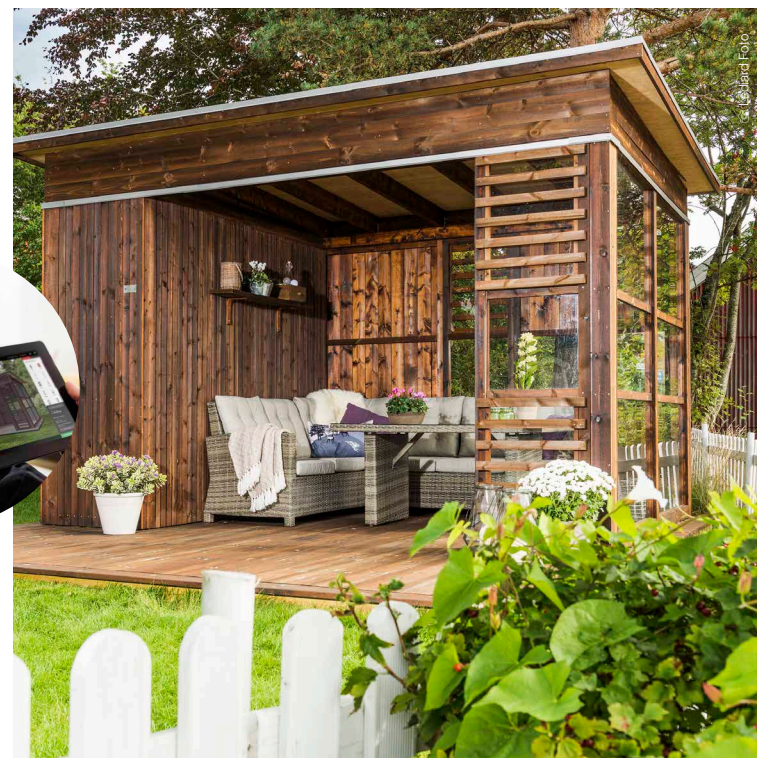

## DEVELOPED BY ARCHITECTS – GREAT VISUAL DESIGN

Talgø PlusConcept has been developed in partnership with Blom Arkitekter. The design of both gazebos and sheds fits well into a wide range of environments, whether it is a detached house in a residential area, a cabin in the mountains or by the sea, parks and open areas, commercial buildings or other settings.

## EASY TO INSTALL – DO IT YOURSELF!

The system is based on prefabricated elements designed for easy assembly. All you need is an extra pair of hands – and the job can be completed in a weekend, depending on the size and complexity of the model.

Watch the installation video on YouTube [▶](#)

Talgø PlusConcept is still evolving  
– the latest developments can be found at [talgo.no](https://talgo.no)

**GLASS:** All glass elements are supplied in single-layer scratch-free 4-millimetre-thick tempered glass.

## PRE-TREATED – PREMIUM QUALITY

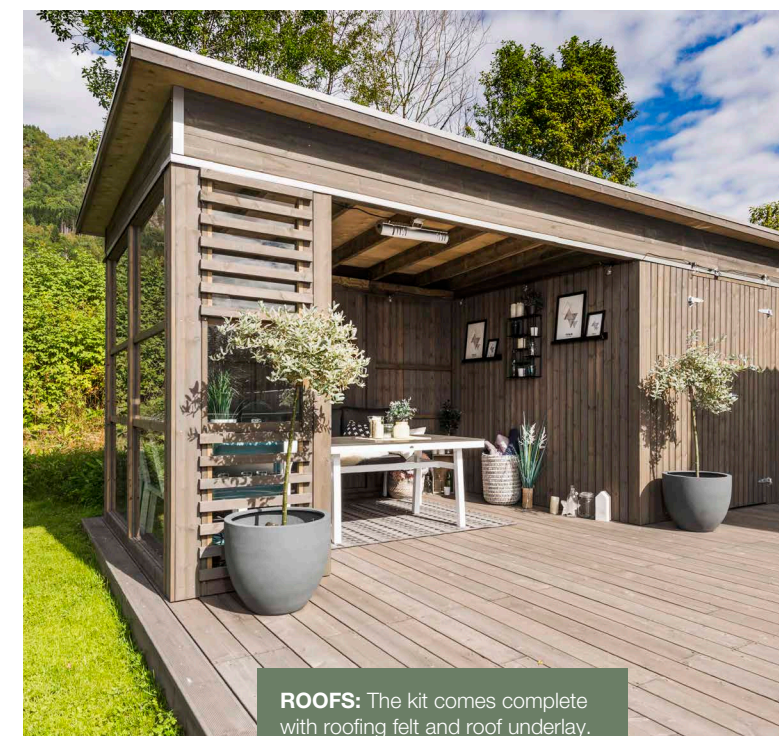

With MøreRoyal-treated materials, the entire kit is pre-painted. Once the structure is assembled, it is ready to go – and no additional painting or staining is required. The materials are both pressure-impregnated and treated with royal oil, so you get all the fantastic properties of MøreRoyal included.

## FLEXIBLE SYSTEM – MULTIPLE OPTIONS

Did you know that it is easy to make individual adjustments to the gazebo or shed by changing the position of the elements? Check out the assembly instructions that come with the building kit for alternative ways to assemble your chosen option. A unique opportunity to be your own builder!

## ALL-IN PRICE

The kits are priced all-in – with the exception of the flooring. No hidden extras, no big surprises. Everything you need is included in the kit.

**ROOFS:** The kit comes complete with roofing felt and roof underlay.

*Listen...*

Remember that our gazebos and sheds are supplied without a floor, as most people choose to install them on existing surfaces such as a patio or a pre-cast foundation.

# DIY

Find inspiration for how to use MøreRoyal products in your next project!

If you have leftover materials lying around after a project, it is both practical and environmentally friendly to use them for a little DIY. How about building this simple plant box, which is suitable for any outdoor space – whether you only have access to a small balcony or have a larger patio. The colour combination is completely up to you. Choose similar colours for a uniform look, or mix up your favourite colours for a more exciting and varied end result. Fill the plant box with colourful plants or flavourful herbs – and voilà, you’re done! Remember that you can also use plant boxes to create different zones in the garden. This is simple and decorative!

View images, read stories, get tips and advice for items to build yourself at [talgo.no](https://talgo.no). Useful material lists and step-by-step instructions make getting started easy.

PLANT BOX

A home-made plant box is easy to make and gives your garden a boost. The plant box can be built in exactly the size you want and can completely transform your outdoor space.

STEPS

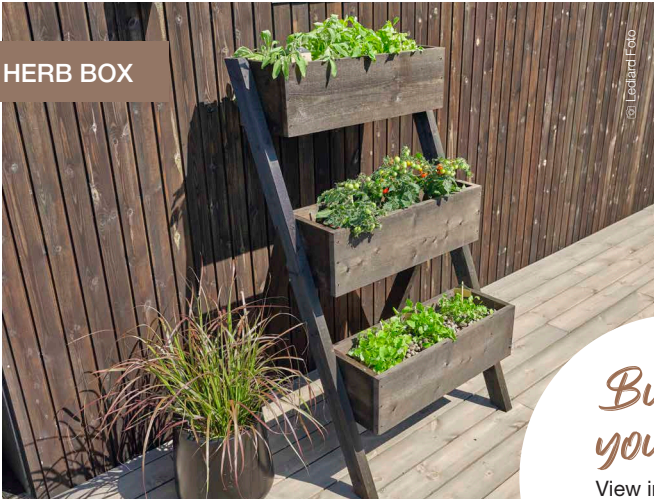

VEGETABLE GARDEN

**DO IT YOURSELF:** If you have leftover materials from a project, it is both practical and environmentally friendly to use them for new items of small furniture or other decorative pieces in your outdoor space. Fill a custom-made plant box with colourful plants or flavourful herbs – you will have your own small vegetable garden in no time.

Build your own garden bench in simple steps. If you use MøreRoyal, you are also assured that the bench is maintenance-friendly, so you can spend your time and energy on what you want to do most.

#### LIVING WOOD

Wood is a beautiful, but organic material. No one can fully predict exactly how a given piece will change over time. This is because wood is affected by its surroundings. Although MøreRoyal products are double-treated materials which have been reinforced to withstand rough climate conditions, they also consist of living timber.

*Beautiful. Durable. Natural.*

# Cleaning and maintenance of MøreRoyal® patios

All timber requires maintenance, including MøreRoyal. However, the maintenance requirements for MøreRoyal are more infrequent and significantly simpler than for many other types of timber. This means that you can spend more time enjoying life outdoors – and less time with a broom and a roller.

patio decking natural

**PATINA:** The colours gradually  
fade due to weathering.

## WASHING

To maintain the beautiful appearance of your patio, it is important that you take good care of it. Although MøreRoyal patios are able to withstand being left untreated for many years without refreshing the oil, annual washing and cleaning is essential. Clean your patio in the spring and in the autumn.

### Our tips:

1. Use a mild domestic detergent and a hose
2. Avoid grease-soluble agents and high-pressure cleaners
3. Wash the patio before you perform any other maintenance

## MAINTENANCE

### Wear and tear

Over time, external factors will wear down all types of wood. MøreRoyal products consist of double-treated materials, and even though horizontal surfaces are worn down by the forces of nature, outdoor furniture and footfall, the oil is pressed into the wood for long-term protection. The rule of thumb is: top up with oil after 6-7 years to best preserve the properties of the materials. Whether you want to refresh the colour before that time is a matter of personal preference.

### Refreshing the colour

The fact that the colours become more muted does not mean that the materials have lost their quality. The oil added during production is still there in the wood, ensuring good protection. Some people prefer the more muted and weathered look that occurs after a while, but if you want to refresh the colour, it can be done quickly and effectively by applying a coat of oil.

### Colours over time

Want to know more about how MøreRoyal colours evolve over time? Check out our COLOURS OVER TIME brochure or find out more at [talgo.no](https://talgo.no).

### Top tips!

Test any colour you intend to use on a smaller area if you are unsure of what will give the best results.

## OIL

MøreRoyal products should be treated with MøreRoyal oils – with or without colour pigments.

### MøreRoyal Timber Oil – for cladding, timber roofs and cut surfaces

Remember to apply MøreRoyal Wood Oil in the same colour as the materials on all cut surfaces during construction to ensure quality and appearance. Using our own maintenance products is a condition of the warranty.

Watch our videos on how to oil cut surfaces on YouTube [▶](#)

### MøreRoyal EXCLUSIVE Patio Oil – for patio maintenance

Use MøreRoyal EXCLUSIVE Patio Oil, with or without colour, to maintain your patio.

### Tips for oiling your patio:

1. Always use MøreRoyal EXCLUSIVE Patio Oil
2. Apply the oil on a clean and dry surface
3. Apply oil with a garden sprayer, roller or brush
4. A thin layer of oil is enough – remove excess oil with a rag

### MøreRoyal TIMBER OIL

For walls, roofs and cut surfaces.  
Available in 0.68 litres and 2.7 litres.

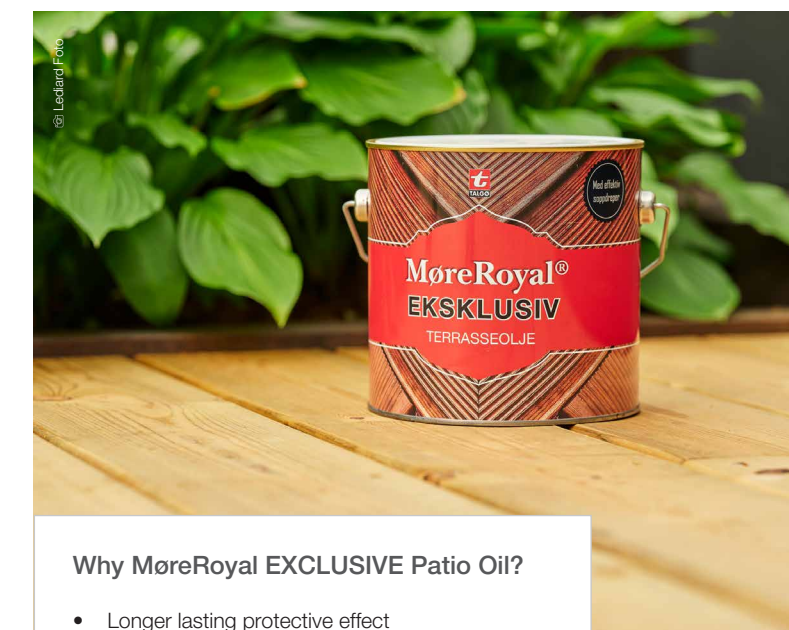

### MøreRoyal EXCLUSIVE Patio Oil

Available in 0.68 litres and 2.7 litres

### Which colour should I choose?

MøreRoyal oil is available in all MøreRoyal colours. If you want to refresh the colour of the materials, we recommend using clear oil. It is also possible to use coloured oil. This will give a deeper colour than the original colour of the materials. This choice is completely up to you!

### Why MøreRoyal EXCLUSIVE Patio Oil?

- Longer lasting protective effect
- Colour pigment with maximum lightfastness and high weather resistance score
- Particularly good UV filter that protects materials
- Higher solids content – a thicker oil
- Covers more square metres and provides long-lasting treatment
- A drying oil that penetrates the wood and protects
